

# Environmental Policy

Establishing environmental conservation activities as an important managerial task, both the management and all employees of our company, in our business activities related to the manufacture of flanges and steel forgings, endeavor to reduce environmental loads as far as possible technically and economically; and conserve and improve the global environment in order to contribute to society.

- 1) We will faithfully observe environmental laws and agreements etc., and establish voluntary control standards where necessary in order to prevent environmental pollution.
- 2) In all business activities related to production, products, and services, we will endeavor to promote the saving of energy and resources, and the reduction, reuse, and recycling, etc. of wastes.
- 3) In order to steadily implement efforts to reduce environmental loads, we will set and review environmental goals and targets each year, and maintain or improve these efforts continuously.
- 4) Through our environmental education programs, we will make our environmental policy known to all individuals working at, or for our works, in order to raise levels of consciousness regarding environmental issues, and thereby promote environmental conservation activities.

In addition, we will seek understanding and cooperation from our cooperating and related companies in order to promote environmental conservation.

- 5) We will publish this environmental policy when requested by external parties.
